R44727

Summary

Over the past few Administrations, Congress has maintained strong interest in and support for the broad global development areas of global health, food security, and climate-related aid and investment. The Obama Administration built its foreign assistance programming around the priorities and practices it identified in the 2010 Presidential Policy Directive (PPD) on Global Development, which identified broad-based economic growth and democratic governance as overarching U.S. development priorities. In particular, the Obama Administration focused on three key initiatives: the Global Health Initiative (GHI), the Global Climate Change Initiative, and the Global Food Security Initiative (Feed the Future). While built on the foundation of existing programs, each initiative was intended to bring new focus, improve coordination, and boost funding to the aid sectors it supported. The initiatives shared several principles, including an emphasis on building host country capacity, investing in innovation and research, using whole-of-government strategies, being results oriented, leveraging global partnerships, and applying a cross-sectoral approach.

- **The Global Health Initiative** was launched to improve health outcomes through strengthened health systems and increased and integrated investments in maternal and child health, family planning, nutrition, and infectious diseases. GHI as a distinct platform faded away over the course of the Administration, but progress in global health outcomes that began during the George W. Bush Administration have been largely sustained during the Obama Administration, and the role of multilateral programs was elevated. Some assert that implementation of the initiative was inadequate, but others contend that U.S. global health programs were strong and effective before President Obama took office, and the scaled back emphasis on GHI reflects recognition that little change was needed.
- **Feed the Future** aimed to accelerate inclusive growth in the agriculture sector of partner countries and improve nutritional status, particularly of women and girls. Feed the Future is the only original Obama foreign aid initiative specifically authorized in law (the Global Food Security Act of 2016, P.L. 114-195). The law established a specific statutory foundation for global food security assistance, required the President to develop a whole-of-government strategy to promote global food security (released in October 2016), and authorized funding to support the strategy (just over \$1 billion per year) for FY2017 and FY2018. The initiative and the legislative support provided by the GFSA have given food security and agricultural development a more prominent role in the U.S. development policy and budget.
- **The Global Climate Change Initiative** ramped up U.S. climate-related aid to developing countries, with a focus on promoting clean energy, sustainable landscapes, and climate change resilience and adaptation. While Congress has not always supported GCCI programs and funding, the United States has met its international pledges, and the initiative has reportedly had an impact on U.S. development practice, with USAID now assessing and addressing climate risks and climate change mitigation opportunities in all new country strategies. However, by promoting its climate agenda primarily through executive action, without seeking the approval of Congress, the Obama Administration has made any progress in this area vulnerable to dismantlement.

Reported results have been mixed, but the Obama Administration's global development initiatives sustained efforts from the Bush Administration on global health and climate change and brought

new attention to food security and agricultural development. While budget pressures have tamped down growth in the foreign aid budget, the portion of U.S. bilateral development assistance obligated for global health, agricultural development, and environment programs—more than one-third of total economic aid from FY2012 to FY2015—increased under the Obama Administration, continuing a trend that began under the Bush Administration. The incoming Administration and the 115th Congress may examine these initiatives as they consider future U.S. global development policy. Interest in these issues, if not these specific initiatives, can be expected to continue beyond the end of the Obama Administration.

Introduction

The Obama Administration built its foreign assistance programming around the priorities and practices it identified in the 2010 Presidential Policy Directive (PPD) on Global Development.¹ The PPD was the first of its kind and sought to elevate global development as a pillar of American foreign policy, alongside defense and diplomacy. It identified broad-based economic growth and democratic governance as overarching U.S. development priorities and focused on three key initiatives as a means to support those priorities: the Global Health Initiative (GHI), the Global Climate Change Initiative, and the Global Food Security Initiative (Feed the Future). While built on the foundation of existing programs, each initiative was intended to bring new focus, improve coordination, and boost funding to the aid sectors it supports.

The Obama Administration followed a particularly active era in U.S. support for global development. Under the George W. Bush Administration, foreign assistance levels more than doubled, a new foreign aid agency was created (the Millennium Challenge Corporation, MCC), and the Bush Administration established, with strong congressional support and involvement, one of the largest foreign aid programs in history—the President’s Emergency Plan for AIDS Relief (PEPFAR). The Obama Administration built upon these efforts, although within the context of an increasingly constrained budget and political environment. Within months of the PPD’s release in 2010, the Republican Party won majority control in the House of Representatives, with priorities often at odds with the Democratic Administration. Concerns about the budget deficit and enactment of the Budget Control Act the next year reduced spending levels across the federal government, thereby reducing prospects for new investments in development assistance programs. Perhaps as a result of this political dynamic, the Obama Administration did not establish new aid programs, with the arguable exception of Power Africa,² but rather sought to reconfigure and refocus existing programs. Some analysts suggest that the Administration was effectively limited after 2010 to efforts that were budget neutral and required little or no support from Congress.³

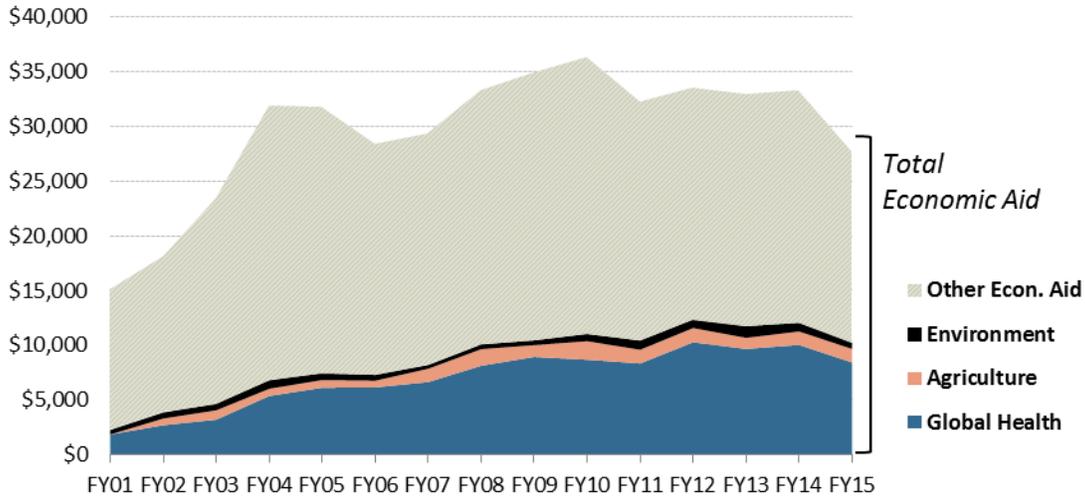

Specific funding for the global health, climate change, and food security initiatives was first requested in the FY2011 International Affairs budget, but support through ongoing program funds was provided in FY2010 appropriations. Congress has generally not used the initiatives as funding frameworks but has supported the activities they encompass to varying degrees. The portion of U.S. bilateral development assistance obligated for global health, agricultural development, and environment programs—more than one-third of total economic aid from FY2012 to FY2015—has increased under the Obama Administration, continuing a trend begun under the Bush Administration (**Figure 1**).

(in millions of constant 2015 \$)

Source: USAID Query Database.

While each of the Obama Administration initiatives is distinct, several common threads run through them, reflecting the Obama Administration’s general global development strategy and priorities, as outlined in the PPD:

- **Focus on Host Country Capacity.** The policy sought to improve aid effectiveness by focusing efforts on partner countries and regions where the conditions seem most amenable to sustained progress. This took the form of “fast track” countries in the Global Health Initiative and “focus countries” in Feed the Future. One aspect of this focus on building partner capacity was an attempt to shift away from a pattern of emergency response aid toward a preventive posture (e.g., agricultural development aid instead of emergency food aid, or increasing capacity of governments to predict floods and other climate change impacts rather than providing post-disaster response). This selective approach is challenged by diplomatic pressure to spread aid broadly, potential conflict between U.S. priorities in a country or region, and concern that aid may be most needed in places with the least government and institutional capacity.
- **Investment in Innovation and Research.** The Obama Administration sought to foster development-focused research as a means to incentivize and identify “game-changing” innovations such as new vaccines, weather-resistant crop varieties, and clean energy technology. The U.S. Global Development Lab within USAID is perhaps the most significant manifestation of this PDD priority, but there are initiative specific components as well. For example, a Food Security Innovation Center (FSIC) was established at USAID as part of Feed the Future, which oversees numerous collaborative research programs, many of which predate the initiative.
- **Whole of Government.** Each initiative, as described in its roll-out and strategy documents, involves several U.S. government agencies beyond the primary international development actors (the U.S. Agency for International Development (USAID), the State Department, and the MCC). The Obama Administration

emphasized that this “whole of government” approach was intended to bring the full range of U.S. expertise and resources to the challenges addressed by the initiatives, as well as to improve the efficiency and effectiveness of existing, but often uncoordinated, international activities. The whole of government approach may also be a way to identify a broader range of ongoing U.S. government funding that can be attributed to these objectives and related international commitments. In practice, this approach has faced coordination challenges, caused in part by varying congressional committee jurisdictions and lack of legislative or executive authority to compel cross-agency coordination and cooperation. The fractured oversight and lack of coordinating authority has also presented challenges for tracking initiative spending.

- **Results-Oriented.** The PPD emphasized the use of metrics by which to measure development progress and the accountability of recipients for achieving results. The initiatives were established with specific goals and, except for the Global Climate Change Initiative (perhaps due to the longer time frames required to return accurate environmental assessments), specific performance indicators. This was not a new concept, but reaffirmed an ongoing whole-of-government effort stemming from the Government Performance and Results Act (GPRA) of 1993, updated in 2010, which established unprecedented statutory requirements for all U.S. government agencies regarding the establishment of goals, performance measurement indicators, and submission of related plans and reports to Congress. The Obama Administration emphasized tracking results and impacts of foreign aid generally, updating the evaluation policies of USAID, State and MCC between 2010 and 2012 to require more frequent and methodologically rigorous evaluation of aid programs.⁴ Congress supported this effort as well, passing legislation in 2016, the Foreign Aid Transparency and Accountability Act, that codified many of the new evaluation and reporting requirements. Nevertheless, measuring outcomes that can be attributed to U.S. aid interventions remains a significant challenge. Much of the results information reported for the initiatives is selective and is not the product of evaluations using control groups to identify impact.
- **Global Partnership.** All of the initiatives sprang from multilateral efforts such as the G8 food security summit or the U.N Framework Convention on Climate Change, and all have multilateral components, including the Global Fund to Fight AIDS, Tuberculosis and Malaria, the Global Agriculture and Food Security Fund, and the Green Climate Fund, among others. Furthermore, each initiative emphasizes working with private sector partners to bring greater resources and expertise to development challenges, a foreign assistance trend that predated the Obama Administration. The Obama Administration made efforts to expand the multilateral aspects of the initiatives, arguing that U.S. resources can be leveraged for greater impact through partnership with other donors and entities, including private sector actors. Congress has generally been less supportive of the multilateral aspects of the initiatives, citing oversight and governance concerns, among other things.

⁴ For more on foreign aid evaluation, see CRS Report R42827, *Does Foreign Aid Work? Efforts to Evaluate U.S. Foreign Assistance*, by Marian L. Lawson.

- **Cross-Sectoral.** One theme of the Obama development approach detailed in the PPD was the need to work across sectors and avoid the “stovepipe” approach for which foreign assistance, and particularly health aid, has sometimes been criticized. The global health initiative, for example, recognized that nutrition, clean water, and women’s empowerment may be as important to healthy communities as vaccines and antiretroviral drugs. Agricultural development activities to promote food security also affect community resilience to climate change. The three initiatives all overlap to some degree in their objectives, creating opportunities for synergies but also confusion over the attribution of funding to one initiative or the other.

This report provides a brief overview of these initiatives as they were introduced, how they have evolved over the years, funding trends, reported results, and other areas of particular congressional interest and activity.

Global Health Initiative

U.S. investments in global health increased significantly under the George W. Bush Administration, primarily as a result of the President’s Emergency Plan for AIDS Relief (PEPFAR). Rather than create a new global health program aimed at a particular disease, President Obama emphasized the integration and coordination of ongoing global health efforts through an initiative he called the Global Health Initiative (GHI). The Administration launched the GHI in May 2009, calling on Congress to provide \$63 billion over five years to “improve health outcomes through strengthened health systems, increased and integrated investments in maternal and child health, family planning, nutrition and infectious diseases including HIV/AIDS, tuberculosis, malaria and neglected tropical diseases, and through a particular focus on improving the health of women, newborns and children.”⁵ The approach was sometimes described as treating patients, not diseases, in contrast to the HIV-specific focus of PEPFAR. While GHI became the framework for all U.S. global health programs, the Administration identified eight “fast-track” countries (Bangladesh, Ethiopia, Guatemala, Kenya, Malawi, Mali, Nepal, and Rwanda) in which to focus additional technical and management support to enable quick implementation and learning from the new approach.

The Administration established a small GHI coordinating office within the State Department, put together GHI country teams in 42 countries, and established GHI country strategies, all with the purpose of streamlining efforts across agencies and program silos. The 2010 Quadrennial Diplomacy and Development Review (QDDR) outlined a plan by which leadership of GHI would shift to USAID when certain conditions were met.⁶ This transition never happened, however, and over the course of the Obama Administration the GHI as a distinct structure or strategy faded away. The “fast-track” country designation was no longer used. The GHI office closed in 2012, and its activities were integrated into the State Department’s Office of Global Health Diplomacy. The Administration reportedly described this change as an elevation and cited the successful integration of GHI principles into country development plans.⁷ Others have commented that the

⁷ See <http://www.pri.org/stories/2012-07-03/obama-administration-closes-global-health-initiative-office>. The blog the article refers to is no longer accessible on the GHI website, but a screenshot of the message about the office closing is (continued...)

office was ineffective and incapable of resolving interagency conflict, largely because it lacked the authority and designated funding to compel the cooperation of other federal entities.⁸ Most agency reports on global health stopped mentioning GHI after 2012, though annual congressional justifications for the international affairs budget continue to frame the global health request in the context of GHI.

Legislation

The GHI was never established in legislation, and the Administration did not seek authorizing legislation. Instead, it relied on existing authorities in the Foreign Assistance Act of 1961, as amended, and the PEPFAR authorization. It could be argued that by not seeking distinct authorization legislation, the Administration lost an opportunity to establish a stronger interagency coordinating authority.

Funding

GHI exists in 2016 largely as a funding framework within the international affairs budget. The Administration requests GHI funding primarily through the State, Foreign Operations and Related Programs (SFOPS) appropriation. Congress in turn appropriates funds not for GHI, but for Global Health Programs, the account that was established in FY2007 to combine appropriations for PEPFAR and the Maternal Health and Child Survival account. Additional global health funds have been provided over the years through appropriations for the Departments of Health and Human Services and Defense. For a detailed account of global health funding trends by agency, see CRS Report R43115, *U.S. Global Health Assistance: FY2001-FY2016*, by Tiaji Salaam-Blyther.

Figure 2. Global Health Funding, Whole of Government and SFOPS

(in millions of constant 2015 \$)

Source: Annual appropriations legislation; CRS correspondence with OMB and implementing agencies.

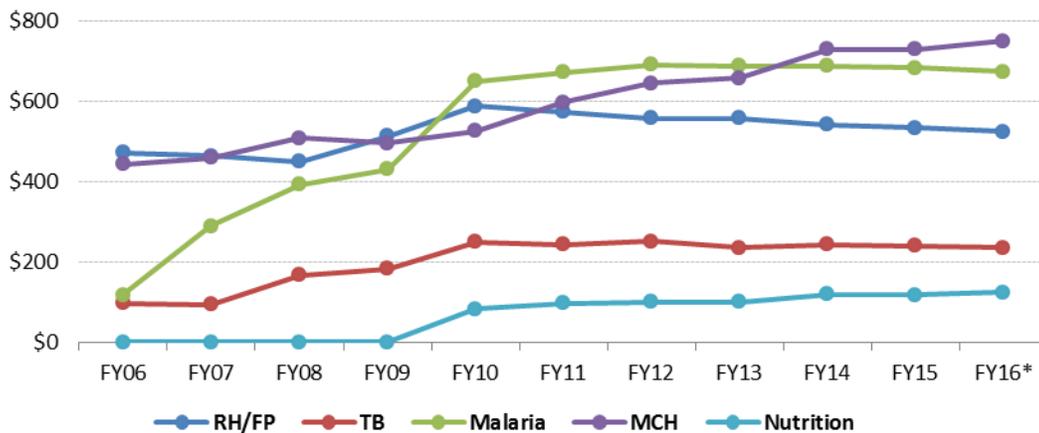

Notes: FY2015 excludes supplemental Ebola funds.

It appears from whole-of-government global health spending data that the initial GHI goal of \$63 million over five years was not met. However, global health funding continued to grow early in the Obama Administration. In current dollars (adjusted for inflation), total global health funding leveled out after 2010 but remained historically high during a period of intense budget pressure (**Figure 2**). Congress and the President were largely in agreement over global health funding levels throughout the Obama Administration.

In several years of the Administration, Congress provided more funds than the Administration requested for global health, including every year since FY2013. While there were initial disparities between the Administration and Congress when it came to allocations for specific global health priorities—for example, the Administration asked for more than Congress provided for Maternal and Child Health and Family Planning/Reproductive Health in some early years of the Administration—sector requests and appropriations aligned fairly closely throughout much of the Obama Administration. Adjusted for inflation, funding for maternal and child health increased steadily during the Obama Administration, while funding for malaria and tuberculosis programs, and for reproductive health and family planning, increased in the early years of the Administration before leveling or even decreasing slightly. In addition, nutrition programs became a distinct global health programs sub-account as part of GHI, and have received slight but steady funding increases (**Figure 3**).

Figure 3. Global Health Funding by Select Subsector

(in millions of constant 2015 \$)

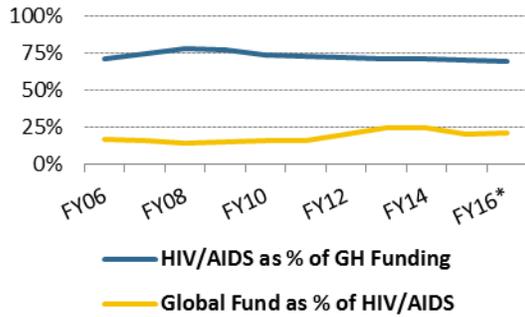

Source: Annual appropriations legislation.

Note: RH/FP = reproductive health/family planning, TB = tuberculosis; MCH = maternal and child health.

Aside from maintaining historically high funding levels for global health programs in general, two specific priorities of the GHI strategy appear to be reflected to a limited degree in the funding trends.

Figure 4. Annual HIV/AIDS and Global Fund as Portion of GHP Funding

Source: Annual appropriations legislation, CRS calculations

The portion of global health funding allocated to HIV/AIDS programs declined slightly but steadily during the administration, from 78% in 2008 to an estimated 70% in FY2016, consistent with the GHI goal of moving beyond the disease-specific focus and supporting broader health systems. A related trend is the increase in multilateral health aid, as represented by U.S. contributions to the Global Fund to Fight HIV, TB, and Malaria. Global Fund contributions increased in both dollar terms and as a portion of the economic assistance budget throughout the Obama Administration, perhaps reflecting the GHI emphasis on partnerships and leveraging the efforts of other donors.

Results

A focus on health outcomes was a key aspect of GHI, and the GHI strategy listed goals and targets in eight primary areas. A GHI website continued to present data related to the various global health focus areas after the GHI office closed, but the data have not been updated since July 2014. **Table 1** compares the key goals detailed in the GHI strategy with recent results reported in a variety of U.S. global health program documents. Although these are not officially “GHI results,” they show areas of continued progress in the individual program areas once encompassed by GHI.

Table 1. GHI Goals and Reported Results

Focus Area	Goal	Corresponding Results from Various Reports
HIV/AIDS	Support the prevention of more than 12 million new HIV/AIDS infections; provide direct support for more than 4 million people on treatment, support care for more than 12 million people, including 5 million orphans and vulnerable children.	<ul style="list-style-type: none"> • PEPFAR is supporting life-saving antiretroviral treatment (ART) for nearly 11.5 million people. • PEPFAR is supporting critical care and support for nearly 6.2 million orphans and vulnerable children to mitigate the physical, emotional, and economic impact of HIV/AIDS on children.^a
Malaria	Halve the burden of malaria for 450 million people, representing 70% of the at-risk population in Africa.	<ul style="list-style-type: none"> • Since its inception, PMI has distributed more than 243 million antimalarial treatments and 102 million insecticide treated bed nets.^b • Between 2000 and 2015, new malaria cases fell by 37%, and malaria mortality declined by an estimated 48% worldwide.^c
Tuberculosis	Contribute to the treatment of a minimum of 2.6 million new TB cases and 57,200 drug-resistant cases of TB, and contribute to a 50% reduction in TB deaths and	<ul style="list-style-type: none"> • In USAID-supported countries, deaths from TB have decreased 42% and the overall prevalence of TB has been reduced by 43% since 1990. • In the countries where USAID works, more than 2.7

Focus Area	Goal	Corresponding Results from Various Reports
	disease burden relative to the 1990 baseline.	million people with TB have been successfully treated and more than 60,000 people with multidrug-resistant TB were put on treatment in 2013 (most recent data available). ^d
Maternal Health	Reduce maternal mortality by 35% across assisted countries.	<ul style="list-style-type: none"> In USAID's 24 priority countries, the maternal mortality ration decreased by more than half, from 680 to 308 per 100,000 live births, between 1990 and 2013.^e
Child Health	Reduce under-5 mortality rates by 35% across assisted countries.	<ul style="list-style-type: none"> Under-five mortality in USAID priority countries dropped from 71 to 47 deaths per 1000 live birth between 2005 and 2015.^f
Nutrition	Reduce child undernutrition by 30% across assisted food insecure countries (in conjunction with Feed the Future).	<ul style="list-style-type: none"> In USAID's 19 nutrition focus countries, stunting has been reduced from 56% in 1990 to 38% in 2014.^g
Family Planning/ Reproductive Health	Prevent 54 million unintended pregnancies by reaching a modern contraceptive prevalence rate of 35% across assisted countries and reducing from 24% to 20% the proportion of women aged 18-24 who have their first birth before age 18.	<ul style="list-style-type: none"> In USAID's 24 priority countries, the percentage of married women using a modern method of contraception has increased from approximately 18.4% in 2000 to 31.6% in 2014.^h
Neglected Tropical Diseases (NTDs)	Reduce the prevalence of 7 NTDs by 50% among 70% of the affected population.	<ul style="list-style-type: none"> From 2006-2014, USAID integrated programs delivered 1 billion NTD treatments to over 550 million people.ⁱ

Source: Compiled by CRS from the 2011 United States Global Health Initiative Strategy Document, available at <http://www.pepfar.gov/documents/organization/136504.pdf>. Results data are compiled from various sources, as indicated in the table notes.

The GHI strategy and results framework faded away over the course of the Administration, but progress in global health outcomes that began during the Bush Administration was largely sustained, and in some areas accelerated during the Obama Administration. Some assert that implementation of the initiative was poorly managed,⁹ while others contend that U.S. global health programs were strong and effective before President Obama took office, and that the scaled back emphasis on GHI as a unique approach reflects a recognition that little change was needed.

⁹ See for example <http://www.cgdev.org/blog/failure-launch-post-mortem-ghi-10>.

Strong support from Congress suggests global health will likely continue to be the leading development assistance sector for years to come.

Feed the Future

The Obama Administration's global food security initiative was the U.S. response to the G8 Summit in L'Aquila, Italy, which was held in June 2009 to address the 2007-2008 global food price crisis.¹⁰ The proportion and absolute number of hungry people worldwide had risen to historic levels. At the summit, President Obama pledged U.S. investments of \$3.5 billion over three years (FY2010 to FY2012) to a global hunger and food security initiative to address hunger and poverty worldwide. The U.S. commitment was part of a global pledge by the G20 countries and others of more than \$20 billion. This represented a return to the U.S. and global development policy agenda of the 1960s and 1970s, which emphasized agricultural and rural development. The United States and other donors channeled a significantly smaller portion of aid funds to agricultural development activities in the 1990s and first decade of the 2000s.

In May 2010, the Administration officially launched the Feed the Future initiative and, in November 2010, established a Bureau for Food Security within USAID to lead implementation of the initiative. Also in 2010, a multilateral trust fund called the Global Agriculture and Food Security Program (GAFSP), administered by the World Bank, was established as the multilateral funding mechanism to fulfill the G8 Summit commitments.

Feed the Future emphasizes accelerating inclusive growth (affecting a broad range of participants, including small-scale farmers and women) in the agriculture sector of partner countries and improving nutritional status, particularly of women and girls. The initiative was built around five principles for sustainable food security first articulated at L'Aquila and endorsed at the 2009 World Summit on Food Security in Rome:

- supporting comprehensive strategies;
- investing through country-owned plans;
- improving stronger coordination among donors;
- leveraging effective multilateral institutions; and
- delivering on sustained and accountable commitments.

The initiative was also a means of focusing and coordinating previously existing U.S. agricultural development policies. Assistance was to be provided primarily to focus countries, of which there are currently 19, which USAID has identified as having the greatest needs, strongest host-country commitment and resources, potential for agricultural led growth, and opportunities for regional synergies.¹¹ For more detailed background information on Feed the Future, see CRS Report R44216, *The Obama Administration's Feed the Future Initiative*, by Marian L. Lawson, Randy Schnepf, and Nicolas Cook.

¹⁰ The United Nations Food and Agriculture Organization (FAO) reported that from June 2007 to June 2008, FAO's food price index increased by 44%, with wheat and rice prices increasing by 90% and maize prices by 35%, prompting global discussions about improving food security.

¹¹ For current information on focus countries, see <https://www.feedthefuture.gov/countries>.

Legislation

Of the three Obama initiatives discussed in this report, Feed the Future is the only one that has been specifically authorized in law, though this authorization was enacted in the last year of the Obama Administration. The activities that constitute the initiative are authorized under the broad provisions of the Foreign Assistance Act of 1961, but Members of Congress chose to introduce legislation to specifically and permanently authorize an agriculture-focused global food and nutrition security strategy and programs with H.R. 1567, the Global Food Security Act of 2016, which was enacted by Congress and signed into law as P.L. 114-195 in July 2016.¹² The law established a specific statutory foundation for global food security assistance, required the President to develop a whole-of-government strategy to promote global food security, and authorized funding to support the strategy (just over \$1 billion per year) for FY2017 and FY2018.¹³ The required strategy was produced by the Administration in September 2016, and includes goals, objectives, and agency implementation plans for FY2017-FY2021.¹⁴

Funding

The Administration, working with Congress, easily met its Aquila pledge. Congress provides funding for Feed the Future programs primarily through the SFOPS appropriations bill. Congress does not specify a funding level for Feed the Future as a whole. Rather, it allocates funds (sometimes a specific amount and sometimes “no less than” a specific amount) for bilateral “food security and agricultural development” activities, which are implemented by USAID, MCC, the Peace Corps, and other agencies. In many years, a separate appropriation has been allocated for U.S. contributions to the GAFSP (administered by the Department of the Treasury), but recent appropriations legislation has not made a specific GAFSP allocation, instead stating that bilateral food security and agricultural development funds could be used for such a contribution.¹⁵ A portion of the Food for Peace program, funded through the Agriculture appropriation but implemented by USAID, is also counted in Feed the Future funding totals. The Administration determines whether or how to allocate these appropriated funds within the Feed the Future framework. As a result, it can be difficult to determine Feed the Future funding patterns based on appropriations acts. However, a look at Administration requests for Feed the Future and congressional appropriation for “food security and agricultural development” and GAFSP contributions year to year shows some interesting trends.

¹² For more information on the legislation, see CRS In Focus IF10475, *Global Food Security Act of 2016 (P.L. 114-195)*, by Sonya Hammons.

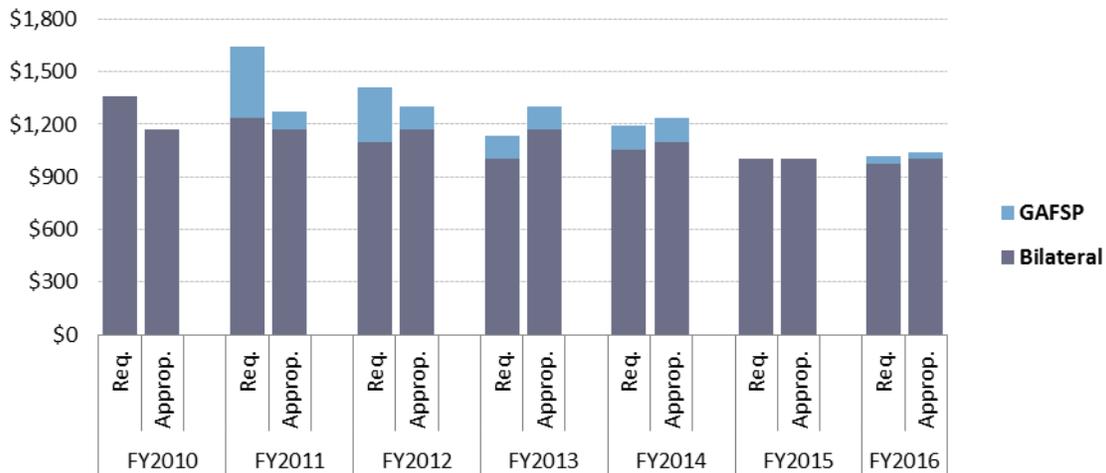

¹³ Timing of the funding authorization corresponds with the expiration of the Farm Bill, which authorizes U.S. commodity food aid programs. While such programs are not currently considered part of Feed the Future, this simultaneous expiration may offer Congress opportunities to coordinate funding, oversight, and programmatic goals between the programs. For more on food aid, see CRS Report R41072, *U.S. International Food Aid Programs: Background and Issues*, by Randy Schnepf.

¹⁴ The strategy is available at https://feedthefuture.gov/sites/default/files/resource/files/USG_Global_Food_Security_Strategy_FY2017-21_0.pdf. The Obama Administration delegated authority for development of the strategy to USAID: <https://www.whitehouse.gov/the-press-office/2016/09/30/presidential-memorandum-delegation-authority-pursuant-sections-5-6a-and>.

¹⁵ Other SFOPS funding, for nutrition activities under Global Health Programs and contributions to the International Fund for Agricultural Development, for example, may also contribute to Feed the Future goals but are not always identified as such in Administration budget requests. P.L. 480 Food for Progress, funded through the agriculture appropriation, is counted in Feed the Future progress reports but not the Feed the Future budget request.

In the early years of the initiative, Administration requests significantly exceeded appropriated amounts, particularly with respect to GAFSP contributions. Since FY2013, however, appropriations have matched or exceeded Administration requests for food security activities, largely because the request for bilateral aid declined each year between FY2010 and FY2013. (Figure 5). In the longer view (Figure 1), agricultural development aid outlays over recent decades suggest that agricultural development became a higher priority within the foreign assistance budget, increasing from 2.2% of total economic aid in FY2005 to 4.5% in FY2015, and notably higher in real dollar terms than a decade prior. This trend began in the later years of the George W. Bush Administration and was maintained by the Obama Administration, even in the face of some early congressional resistance.

Figure 5. Requested and Appropriated Funds for Bilateral Food Security Aid and U.S. Contributions to the GAFSP, FY2010-FY2015
(in millions of current U.S. \$)

Source: Annual international affairs (Function 150) Congressional Budget Justifications; annual State-Foreign Operations appropriations legislation.

Notes: Request data do not include nutrition funding (requested through Global Health Programs), P.L. 480 food aid funds, or contributions to the International Fund for Global Development, which are all associated with Feed the Future but not counted under the Feed the Future heading in annual CBJs. Appropriated numbers include funding explicitly allocated in the appropriations bill or accompanying report, but may not reflect funds used for the purpose as a result of administration discretion. For example, the Administration did make a contribution to GAFSP in FY2015, though there was not a related provision in appropriations.

Results

To track the progress of the initiative, Feed the Future established two key impact indicators and several related output indicators. Table 2 summarizes some of the substantial but incomplete data on the two main goals of Feed the Future, as well as select output and outcome indicators that the Administration says can be directly attributed to U.S. government funding. All data are from the most recent report on Feed the Future progress.¹⁶

¹⁶ The report is available at https://feedthefuture.gov/sites/default/files/resource/files/2016%20Feed%20the%20Future%20Progress%20Report_0.pdf.

Table 2. Feed the Future Goals and Reported Results

Goal	Results Data from 2016 Progress Report
Reductions in Poverty of 20% by 2017.	<ul style="list-style-type: none"> Poverty had dropped between 7% and 36% within 11 of the 19 focus countries.^a
Reduction in Childhood Stunting of 20% by 2017.	<ul style="list-style-type: none"> Child stunting has dropped between 4% and 40% within 8 of the 19 focus countries.^a As of 2015, Cambodia, Honduras and Kenya were on track to exceed Feed the Future stunting reduction targets if they maintained their current rate of progress.
Select Indicators	Results Data from 2016 Progress report
Hectares tended with improved technologies or management practices as a result of U.S. government assistance.	<ul style="list-style-type: none"> 5,329,462 in FY2015, of which 32% were tended by females.
Children under 5 reached by U.S. government-supported nutrition programs.	<ul style="list-style-type: none"> 18,006,457 in FY2015, of which 51% were female.
Value of incremental sales (collected at farm level) attributed to Feed the Future.	<ul style="list-style-type: none"> \$829,439,579 as of FY2015.

Source: Compiled by CRS from the Feed the Future 2016 Progress Report, *Growing Prosperity for a Food-Secure Future*, pp. 4, 10-11.

Notes: The baseline data years used to calculate the change vary from country to country. Some country data covers the period 2010-2015, while in other countries the data period is as limited as 2013-2015.

a. Results reflect varying time periods. In Kenya, the country for which the greatest improvement is noted, the data covers 2008-2015, predating Feed the Future. In Guatemala, the relatively limited progress (6% reduction) may be because the period covered is only two years: 2013-2015.

While the data on poverty reduction and stunting is limited and shows mixed results, Feed the Future appears to be achieving some measure of success. One independent assessment of the initiative found that the Obama Administration has succeeded in focusing agricultural development aid in select focus countries, consistent with Feed the Future criteria on need and potential for effective partnership.¹⁷ The same assessment pointed out, however, that the initiative is not as transparent as it could be, that country ownership is lacking, and that Feed the Future appears to be more a USAID program than the whole-of-government effort it was proclaimed to be. The GFSA may address these issues, as it calls for presidential coordination for food security activities, not a USAID-led effort, and lists the agencies for which a detailed accounting of food security activities is required by the bill. The authorization of funding in GFSA, however, is for USAID. There is little doubt that Feed the Future and the legislative support provided by the GFSA have given food security and agricultural development a more prominent role in the U.S. development policy and budget. It is unclear, however, if these programs, and the principles by which they have been organized, will be a priority for the new administration and the 115th Congress.

¹⁷ See *Assessing the US Feed the Future Initiative: A New Approach to Feed Security?* by Kimberly Elliott and Casey Dunning, Center for Global Development Policy Paper 075, March 2016, available at <http://www.cgdev.org/publication/assessing-us-feed-future-initiative-new-approach-food-security>.

Global Climate Change Initiative

As with the other initiatives, the Global Climate Change Initiative (GCCCI) built on existing climate related efforts, adapted and scaled up to reflect evolving global efforts. Under the Clinton and George W. Bush Administrations, USAID was already pursuing environmental protection and adaptation activities, and the United States was already contributing to several multilateral climate investment funds, consistent with U.S. commitments stemming from the 1992 U.N. Framework Convention on Climate Change (UNFCCC) and subsequent related international agreements. The CGGI ramped up U.S. climate-related aid to developing countries, reflecting a proposal made jointly by developed countries under the December 2009 Copenhagen Accord, in which the Administration committed to working with other donors to provide “fast start” climate financing collectively approaching \$30 billion during the period 2010-2012 (both public and private investment). Documents accompanying the 2010 PPD¹⁸ describe the initiative as focused on three key objectives:

- **Investing in Clean Energy:** The initiative sought to accelerate the deployment of clean energy technologies, policies, and practices as a means of reducing greenhouse gas emissions for energy generation and use. Much of the funding for this pillar was anticipated to be channeled through the World Bank’s multilateral Climate Investment Funds (CIFs), which include the Strategic Climate Fund and the Clean Technology Fund, to take advantage of large-scale greenhouse gas reduction opportunities. Bilateral aid was focused on shaping policy and regulatory environments to ensure long-term sustainability.
- **Promoting Sustainable Landscapes:** As part of the “fast start financing” in the Copenhagen Accord, the Obama Administration committed \$1 billion from 2010 to 2012 to support country plans to reduce greenhouse gas emissions from deforestation and forest degradation (REDD+). The Administration described this pillar as a cost-effective way to reduce greenhouse gas emissions while providing sustainable development benefits.
- **Supporting Climate Change Resilience and Adaptation:** This pillar focused on helping the most vulnerable low-income countries to reduce the social, environmental, and economic impacts of climate change. A key aspect of this effort was integrating climate change considerations and solutions into development activities in all relevant sectors.

Aside from the focus areas, the Administration identified several ways in which the GCCCI promoted the Administration’s broader development policy, including promoting country ownership, promoting climate solutions that spur economic growth, ensuring sustainability of economic growth gains through actions that protect investments, strengthening governance and inclusive planning processes, and investing in potentially game-changing science and technology. To implement the initiative, an Office of the Special Envoy for Climate Change was established within the State Department in 2009. At USAID, GCCCI activities were coordinated through the Environment and Science Policy Office, which was in 2012 renamed the Office for Global Climate Change.

¹⁸ Available at https://www.whitehouse.gov/sites/default/files/Climate_Fact_Sheet.pdf.

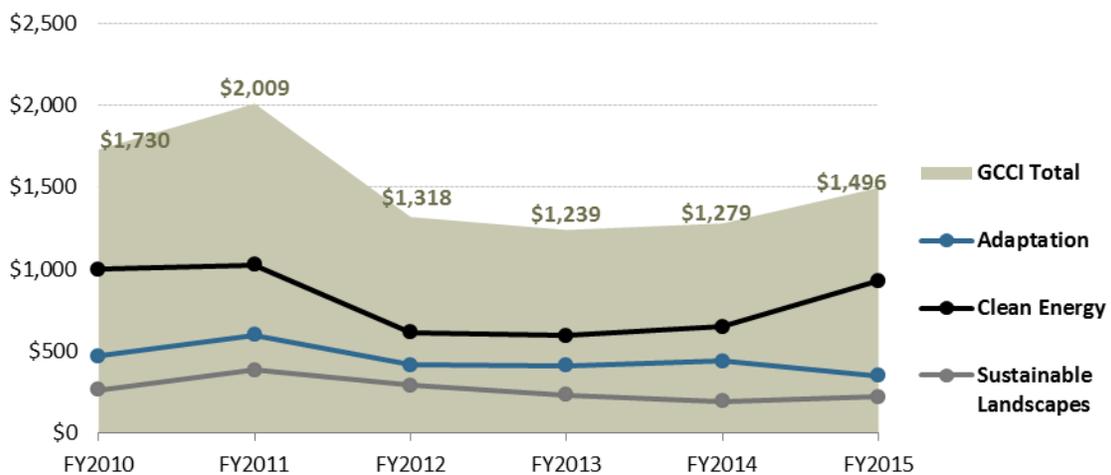

Legislation

Several bills supporting aspects of the Obama climate change policy and programs were introduced in the 111th Congress, early in the Obama Administration. Most notably, then-Senator John Kerry introduced the International Climate Change Investment Act of 2009 (S. 2835) in December 2009, which would have established an interagency board on climate change to assess, monitor, evaluate, and report on the progress and contributions of departments and agencies in supporting funding for international climate change activities and the goals and objectives of the UNFCCC. The bill also would have required the USAID Administrator to establish a program to reduce global greenhouse gas emissions, and the Secretary of State to develop a climate adaptation and global security program, among other things. No action was taken on the legislation or on other legislation that was introduced to support GCCI-related activities in a comprehensive way. However, relevant authority for GCCI programs exists in the Foreign Assistance Act sections on development assistance and the economic support fund, including Section 118 on tropical forests and Section 296(H) with regard to resilience to famine.

Funding

Congress does not designate an annual funding level for the GCCI, though appropriators have made specific allocations in some years for REDD+ and other forestry initiatives, understood as the “sustainable landscapes” pillar of GCCI. The Administration typically uses funds from the Development Assistance and other bilateral appropriations accounts that are authorized to support environmental protection activities, among other things. In addition, there are designated Treasury Department accounts for many of the multilateral environmental trust funds, and a portion of annual Millennium Challenge Corporation funding is also counted by the Administration toward the GCCI. Aside from appropriated funds, development finance provided through OPIC and export credits provided through the Export-Import Bank are counted as GCCI resources in recent reporting as well.

Figure 6. Appropriated GCCI Funding by Pillar and Year, FY2010-FY2015
(constant 2015 \$, in millions)

Source: Overview of the Global Climate Change Initiative: U.S. Climate Finance 2010-2015, p 2. Dollar amounts were converted to 2015 constant dollars using the non-defense deflators in table 10.1 of the 2017 U.S. Budget.

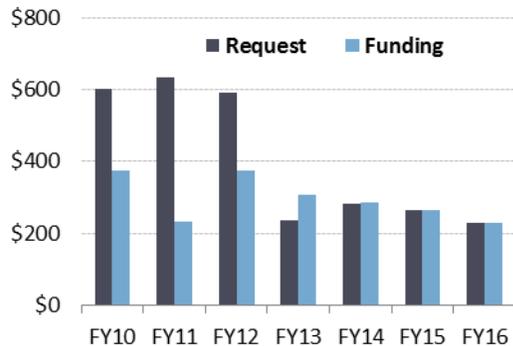

Total appropriated funding for GCCI, when adjusted for inflation, peaked in FY2011, before falling 34% in FY2012 and rising again FY2015. **(Figure 6)** Funding for clean energy programs, which has been the highest funded component of the initiative every year, ticked upward again in FY2015, bringing total GCCI funding up 17% between FY2014 and FY2015, but still well below the early years of the initiative, in real terms.

U.S. contributions to the multilateral components of GCCI are commonly (but not entirely) requested and appropriated as distinct line items, allowing for a comparison of requested and appropriated funds. Comparing requested funds with actual funding for those funds for which data are available (e.g., the Climate Investment Funds), the trend shows the Administration aiming high in its initial years, Congress providing far less than requested, and the President eventually scaling down requests for multilateral GCCI funding to a level in line with congressional support in the second half of his Administration.¹⁹

In the FY2016 budget request, the Administration attempted to ramp up multilateral climate change funding in a new form, requesting \$500 million (split between State and Treasury accounts) for a new Green Climate Fund (GCF), to which the Administration pledged \$3 billion in November 2014. The fund was intended to be the primary financing mechanism of the UNFCCC, succeeding contributions made to the two multilateral Climate Investment Funds (to which the United States completed a four-year, \$2 billion pledge with FY2016 funding). The FY2016 appropriation did not include a specific allocation for a Green Climate Fund, but the accompanying report noted that other funds in the act, or enacted in prior foreign operations appropriations, could be used for this purpose with proper congressional notification.²⁰ The Administration made a \$500 million contribution that year, using the Economic

Support Fund account, to the consternation of some Members of Congress. Funding for the GCF remains a contentious issue in Congress. In its FY2017 budget request the Administration proposed \$750 million for the GCF and no funding for the CIFs, as the U.S. commitment to the CIFs had been met and the GCF was supplanting them. Congress has yet to finalize appropriations for FY2017 (a long-term continuing resolution is funding most programs at the FY2016 level), but the House SFOPS committee-approved bill (H.R. 5912) included a provision prohibiting the use of funds for a contribution to the GCF, while the Senate committee-approved bill (S. 3117) allowed for a GCF contribution up to \$500 million.

Results

Unlike the Global Health Initiative and Feed the Future, the GCCI did not establish specific numeric goals and metrics by which to measure progress. However, a 2016 State Department Overview of the GCCI lists many examples of the type of support provided through the initiative, though many are not quantified and some report projected impacts rather than results achieved. USAID has also published some results from its GCCI activities in a recent USAID Climate Action Review, 2010-2016. Select results of the initiative, as reported in these State Department and USAID documents, are detailed in **Table 3**.

Table 3. Select Results of the GCCI, by Pillar

GCCI Pillar	Select Results
Adaptation	<ul style="list-style-type: none"> • President Obama’s Executive Order 13677 required all U.S. government agencies to incorporate climate resistance into U.S. development assistance programs as of October 1, 2015. • Provided more than 60 countries with weather, climate and land-use information for development. • USAID has helped 5.3 million people access and use climate data to reduce their vulnerability to climate change. • Trained more than 2,000 people to use geospatial techniques; fulfilled more than 1 million requests from 37 countries for online mapping imagery; developed systems that are providing advanced flood warning to tens of millions of people.
Clean Energy & Sustainable Landscapes	<ul style="list-style-type: none"> • Supported low-emissions development strategies in 26 developing countries. • Supported 21 countries in developing their intended nationally determined contributions to the UNFCCC through bilateral programs, and another 45 through U.S. contributions to the Global Environment Facility. • Building the capacity for the development of national greenhouse gas emissions inventories in 26 countries. • USAID furnished technical assistance to 12 countries to help develop their climate commitments for the Paris Agreement. • USAID provided technical assistance and capacity building to help partner governments develop or establish 1,527 laws and policies promoting climate change mitigation.
Clean Energy	<ul style="list-style-type: none"> • Financial support for the development of more than 4,000 megawatts of new renewable energy generating capacity, through U.S. development finance and export credit programs, including 750 megawatts in sub-Saharan Africa. • USAID support to 13 Clean Energy countries has added more than 50,000 megawatts of new clean power capacity. • USAID support has enabled more than 300 prospective clean energy investments with a projected value of more than 12.5 billion. • USAID partners such as microfinance institutions provided more than 275,000 loans to consumers to purchase clean energy devices. • More than 2 million people not have improved access to energy as a result of USAID small-scale clean energy programs. • Supporting an additional 15,000 megawatts in projected, new renewable energy generating capacity.

GCCCI Pillar	Select Results
Sustainable Landscapes	<ul style="list-style-type: none"> • Leveraging resources for large scale emission reduction activities, such as the Forest Carbon Partnership Facility’s Carbon Fund, which has helped develop 18 large-scale emissions reduction programs that, if fully implemented, will reduce greenhouse gas emissions by up to 300 million metric tons of carbon dioxide equivalent (equivalent to taking 64 million cars off the road for a year). • Supported improved forest management in key tropical landscapes, including the Congo, Amazon and Mekong basins, Indonesia, Mexico and Central America, and West Africa. • In FY2015, USAID programs resulted in almost 50 million tons of CO₂ being reduced, sequestered or avoided around the world. • Since 2010, seven partner countries have generated a total of \$175 million for communities employing sustainable land use practices using system by which land users pay land protectors. • USAID programs have improved the ability of more than 12 tropical forest countries and 14 additional countries to monitor their forests to improve management and reduce emissions from deforestation.

Source: Compiled by CRS from *Overview of the Global Climate Change Initiative: U.S. Climate Change Finance 2010-2015*; USAID Climate Action Review, 2010-2016.

In addition to the external results reporting, USAID reports that the GCCCI has impacted how the agency approached development. USAID reports that climate change was incorporated into 62% of USAID country and regional strategies between 2011 and 2015, and beginning in 2015 USAID began to assess and address climate risks and consider climate change mitigation opportunities in all new country strategies. Even among activities that received no designated climate change funding, USAID reported that 18.5% integrated climate change elements, compared with 8% in 2009. USAID asserts that more than \$1 billion in USAID funding, beyond designated GCCCI funding, has contributed to climate change objectives.²¹

Some consider the conclusion of the 2015 Paris Agreement, through which 195 nations agreed to reduce the effects of climate change by maintaining global temperatures “well below 2°C above pre-industrial levels,” a success attributable in part to the GCCCI.²² GCCCI bilateral funds have been commonly used to assist partner countries in developing the plans and capacities necessary to support the greenhouse gas abatement commitments that are key to the Agreement. Critics, however, assert that by choosing to make U.S. global policy on climate change almost exclusively through executive action, without seeking the approval and involvement of Congress, the Obama Administration has made any progress in this area vulnerable to dismantlement in a new Administration.²³

Conclusion

The Obama Administration’s global development initiatives sustained Bush Administration efforts on global health and climate change, and brought new attention to food security and agricultural development. The full potential of these initiatives was perhaps blunted to varying

degrees by budget pressures, agency coordination issues, partner country issues, and, in the case of climate change, lack of congressional support. The lasting legacy of the Obama Administration on global development, some say, may be more about the “how” than the “what” of development.²⁴ The principles emphasized in the PPD—elevation of development, partnership and accountability, innovation, evaluation, local procurement, data driven development policy, and interagency cooperation—may be the Obama Administration’s unique global development legacy, more than choice of development sector priorities. The “why” aspect of the initiatives, which the PPD clearly frames in terms of promoting U.S. national security, could be reexamined by the new Administration and the 115th Congress together with the “what” and the “how” aspects. Nevertheless, sustained congressional interest in global health and food security, and the coordinated global efforts around climate change, may keep these issues prominent in global development policy discussions beyond the end of the Obama Administration.
